

SMOKESCREEN

DETECT, DEFLECT, DEFEAT.

Smokescreen brings military deception to the digital battlefield with the industry's most advanced deception technology. Battle-tested against apex attackers, our technology works across the entire kill chain, giving you unparalleled detection of advanced cyber-attacks.

Some of the most targeted organisations globally rely on our IllusionBLACK platform as their ultimate line of defence.

Targeted attacks are designed to easily defeat traditional solutions, so companies with these 'static defences' get hacked every single day. To win, you need an 'active defence' that turns the tables and takes the fight to the attacker.

WHAT IS DECEPTION TECHNOLOGY?

Deception technology implements strategies used by the greatest armies throughout history.

Digital decoys of your real assets are distributed everywhere, deceiving attackers into revealing their game-plan before they can do any damage.

Deception targets the weakest link in the attack — The attacker behind the keyboard.

How attackers bypass current solutions

MALWARE-LESS ATTACKS

Modern attacks use legitimate administrative tools, so anti-malware solutions cannot catch them.

THE SIGNAL IS LOST

Security teams face 'event fatigue' from the false alarms SIEM systems generate. Attackers hide in this noise.

FLYING UNDER THE RADAR

Lateral movement happens over months or even years, so anomaly detection systems can't detect it.

And why deception technology succeeds...

ATTACK AGNOSTIC

Deception technology catches the intent of the human, breaking their strategy even when they change tools or use zero day exploits.

FALSE POSITIVE FREE

Decoys should never be accessed legitimately, so any activity is definitely malicious and raises a single, highly actionable alert.

LATERAL MOVEMENT DETECTION

Decoys are planted like landmines through the entire environment, catching the movement of even the stealthiest attackers.

“Outperforms market leading solutions that cost significantly more.”

EXECUTIVE VP - MULTI-NATIONAL INFRASTRUCTURE COMPANY

“Detects threats much more effectively than conventional monitoring.”

CTO - DIGITAL PAYMENTS PROVIDER

“Uncovers lateral movement and improves internal network visibility.”

CSO - LEADING PRIVATE SECTOR BANK

• **PRIVATE THREAT INTELLIGENCE**

Detect reconnaissance before an attack begins.

• **DECOY PERSONAS**

Uncover targeted social-engineering attacks.

• **ENDPOINT DECEPTION**

Catch privilege escalation and misdirect attackers.

• **RAPID FORENSICS**

Natural language attack reconstruction, full forensic evidence, threat intelligence.

• **NETWORK DECEPTION**

Unparalleled visibility into every single subnet.

• **FULL-STACK DECOY PERSONALITIES**

Customise decoy networks, hosts and applications.

• **THREATDEFLECT™**

Divert attackers into a massive cloud of decoys.

• **DATA DECEPTION**

Track data-theft across a nexus of perpetrators.
